

Package ‘shinyglass’

July 7, 2026

Type Package

Title Apple-Inspired Liquid Glass Design for Shiny Applications

Version 0.1.0

Description Provides the exported function 'glass_theme()', which returns a 'bslib' theme object styled with an Apple-inspired Liquid Glass aesthetic for use in 'shiny' applications. The theme applies translucent surfaces, backdrop blur, and system typography to Bootstrap components. See Apple's Liquid Glass design overview at <https://developer.apple.com/documentation/technologyoverviews/liquid-glass>.

glass_theme

*Apple Liquid Glass theme for Shiny***Description**

Returns a [bslib::bs_theme()] object styled with Apple's Liquid Glass aesthetic. Pass it to 'fluid-Page()', 'navbarPage()', or any bslib-aware page function; that is all you need.

Usage

```
glass_theme(
  preset = c("light", "dark"),
  primary = "#007AFF",
  blur = 28,
  saturation = 200,
  radius = "1.25rem",
  ...
)
```

Arguments

preset	"light" or "dark". Controls the overall color scheme.
primary	Primary accent color. Defaults to Apple system blue ('#007AFF').
blur	Backdrop blur radius in pixels.
saturation	Backdrop saturation percentage.
radius	Default border radius for glass surfaces.
...	Additional arguments forwarded to [bslib::bs_theme()].

Value

A [bslib::bs_theme()] object.

Examples

```
## Not run:
library(shiny)
library(shinyglass)

ui <- fluidPage(
  theme = glass_theme(),
  titlePanel("Liquid Glass"),
  selectInput("color", "Color", c("Blue", "Purple", "Orange")),
  plotOutput("plot")
)

## End(Not run)
```
